A Senior Senior Secondary School Affiliated to CBSE New Delhi

CBSE Affiliation No : 3430770

School Code : 67115

RTE : 1137/24-25

UDISE CODE: 20030605018

WATER CONSERVATION AWARENESS MESSAGE

Water is the essence of life. Every living being on Earth depends on water for survival, yet this precious resource is rapidly depleting due to human negligence, overuse, and pollution. Despite the fact that nearly 70% of the Earth's surface is covered with water, only a very small percentage is fit for human consumption. This makes it our moral responsibility to use water wisely and conserve it for future generations.

Today, many parts of the world are already facing severe water shortages. Rivers are drying up, groundwater levels are falling, and clean drinking water is becoming scarce. If we do not act now, the situation will become even more critical in the coming years. Water conservation is not just an environmental issue—it is a necessity for survival.

Saving water begins with small but meaningful steps in our daily lives. We should always turn off taps when not in use, fix leaking pipes immediately, and avoid unnecessary wastage. Rainwater harvesting is an effective method to store water for future use. Reusing water for gardening and cleaning purposes can also significantly reduce wastage.

In schools, homes, and communities, awareness must be spread about the importance of conserving water. Students, in particular, can play a vital role by adopting water-saving habits and encouraging others to do the same. Every drop saved today is a step towards a secure tomorrow.

Let us remember that water is not an unlimited resource. If we waste it today, we may regret it tomorrow. Together, we can make a difference by being responsible and conscious in our use of water.

- Save Water, Save Life!**
- Every Drop Counts!**
- Conserve Water for a Better Future!**

WATER IS PRECIOUS – DON'T WASTE IT!

Water is the foundation of life on Earth. Yet, due to careless usage and pollution, clean water is becoming scarce day by day. It is our duty to conserve water and protect this vital resource for future generations.

□ WHY SAVE WATER?

- Only 1% of Earth's water is usable.
- Water scarcity is increasing rapidly.
- Future generations depend on our actions .

□ HOW CAN WE HELP?

- ✓ At the time of bath or brush in the morning use water judiciously .
- ✓ Turn off taps when not in use.
- ✓ Fix leaking pipes immediately.
- ✓ Harvest rainwater.
- ✓ Reuse water whenever possible.
- ✓ Spread awareness.
- ✓ Use minimum water when washing your hand or face.
- ✓ Do not use drinking water for gardening.
- ✓ Use Minimum water for vehicles washing and machine washing.

REMEMBER:

“If you save water today, it will save you tomorrow.”

CONSERVE WATER, CONSERVE LIFE!

Be a Water Hero! , Jai Hind , Jai DAV
